

--ABSTRACT OF THE DISCLOSURE

The invention relates to a breast support apparatus for use with any garment. The sling or wrap of material is elasticated or "stretchable" and non-slip, for example, being of cotton/polyester. The sling or wrap of material has been shaped as shown with the ends being narrowed to the width of elasticated, connecting strap, the ends being joined to the strap and to one another, for example, by appropriate stitching. The ends of the strap are passed through an opening in metal connecting buckle of the connecting strap. The connecting strap may be used to connect or hook the breast apparatus to an appropriate location on an outer garment.--
